THE CHALLENGE

- In low-income countries, fewer than two of three girls complete primary school and only one in three finishes lower secondary school.
- A shocking 60 million girls are sexually assaulted every year on their way to school or while in school.
- Women account for two-thirds of the 750 million adults who lack basic literacy skills.
- In some areas, boys are more disadvantaged than girls. In South Asia, East Asia and the Pacific, more girls than boys are enrolled in lower secondary school.
- The COVID-19 pandemic has taken an especially devastating toll on girls and women, threatening to derail recent progress toward gender equality.

Education drives gender equality which is key to creating a more peaceful, prosperous, healthy and sustainable world. But for education to fulfill its potential, both girls and boys must equally benefit from it.

GPE/Ludovica Pellicioli

Twice as many girls are on the path to gender equality in GPE partner countries, with 82 million more girls in school since GPE’s founding in 2002.

Girls’ primary enrollment rose by 65% since 2002, and nearly three-quarters of GPE partner countries have achieved gender parity in primary school completion rates.

50% of girls completed lower secondary school in GPE partner countries in 2018, up from 41% in 2010.

WHY GENDER EQUALITY IN EDUCATION MATTERS

Gender equality is a precondition for ending poverty, building peaceful and more resilient societies and achieving sustainable development. Education is a game-changer in helping achieve a more gender-equal world:

- Greater gender equality in education decreases a country’s likelihood of conflict, boosts economic prosperity and improves resilience to climate disasters.
- Eliminating education gaps between girls and boys is a powerful way to prevent persistent inequalities from repeating from one generation to the next.
- Universal girls’ education would practically end child marriage, more than halve infant mortality, and drastically reduce early childbearing, overcoming some of the main drivers of gender inequality.
- Gender-equitable education promotes the development of life skills such as self-management and critical thinking that young people need to succeed and closes skills gaps that perpetuate wage inequality and stunt countries’ economic growth.

CLOSING THE GENDER GAP IN AFGHANISTAN

In countries affected by conflict, girls are more than twice as likely to be out of school than girls living in more peaceful societies. Since 2011, GPE has helped address gender inequality in Afghanistan by focusing support on 13 provinces with the lowest education rates and highest gender inequalities. GPE helped the government create community-based schools closer to girls to reduce the safety risks of traveling long distances to their classrooms. Female teachers were recruited and trained to serve as role models in these underserved areas. As a result, 20,000 more girls enrolled. Girls’ enrollment in primary school has doubled overall, including in conflict-affected areas.
